

Map A (from Thomsen *et.al.* 2004), shows the pre-Quaternary surface, in the test area, based only on data from boreholes. In maps B and C the test area is marked with a black square. Map B (from Schröder 1974) shows the pre-Quaternary surface, based on DC-soundings. Map C (from Thomsen *et.al.* 2004) shows the pre-Quaternary surface, based on transient electromagnetic sounding (TEM). Grey color represents villages where TEM will be affected by noise. Above is shown the density of data.
